IQScheduler

- Windows 98/NT/2000/XP point and click and multi-tasking ease of use.
- Stand alone or integrated with InfoCare Practice Management Software.
- You will be able to schedule appointments for more than one person and if desired, at multiple locations. You can identify reasons for appointments and their allotted time so that the system can check if appropriate amount of time is available before the next appointment.
- Software allows you to enter a schedule for each provider for each day either one day at a time or on a recurring basis. If a provider is not available at a particular time, the time slot is not shown.
- You can identify holidays when the office is closed so that no schedule can be set on holidays.
- Appointments can be in as less as 5 minute intervals.
- Software checks if an appointment has already been made and shows you this next appointment, thus avoiding duplicate appointments.
- You can search appointment for a patient as well as next available appointment for a specific provider or for any provider.
- You can repeat an appointment for several weeks.
- You would be able to 'double book' patients at any time slot.
- You can also make appointments for other than patients. Making an appointment gives you three choices, new patient, existing patient, or someone other than a patient.
- Navigating appointments is very easy. You can go from one day to next by clicking arrow, you can move forward by weeks and you can go to a specific day by looking at a built in calender.
- There is no 'limit' as to how much in advance you can book an appointment, as long as a provider schedule is available.
- You can move an appointment from one slot to another without deleting and reentering. Thus, patients calling to change appointments can be handled more efficiently.
- You can print appointments for a day by provider and/or by a facility. You can print just for a day or for a range of days.
- You can identify reasons for cancellation.
- You can keep track of who you are referring patients to.
- You can specify rooms with the appointments.
